

PROJECT PROFILE:

Location	Griffin Wind Farm, Aberfeldy, Perthshire, Scotland
Client	Lagan Construction Ltd
Value	£676,000
Duration	6 months
Quantities	60,000t 6X3 drainage material, 60,000t concrete aggregate, 170,000t crusher run, 70,000t type 1 sub-base, 80,000t dust
Description	<p>RJT were awarded the contract through a tender process. RJT were contacted to produce base and capping materials on this site to supply the building of a road infrastructure within the wind farm site. The client being impressed with the working practices then approached RJT to produce drainage materials prior to turbine bases being erected and all concrete aggregates to be used for laying of the bases.</p> <p>RJT advised the client on development of the various borrow pits and controlled all traffic management within these areas.</p>
Key Issues	Health, safety and environmental procedures. Correctly graded aggregates for formation of turbine bases. Development of borrow pits. Availability to produce various products as and when required by the client according to their schedule.
